

- [30-May-2013] Bug reported in the deaccumulation sub-routine of `loadSeasonalForecast`. The problem lies in the structure of the data matrix when the "initDays" (used for initializing the deaccumulation) are removed from the final Data matrix. Only occurs when `length(members) > 1`
- [31-May-2013] Bug reported in `dataInventory`. For the merra dataset dimension level is called `lev` instead of `level`, and the dimension is not recognized, returning the values of the last axis recognized (in this case the time axis). Change `lon`, `lat` and `level` by the regular expressions `^lon`, `^lat`, and `^lev` to avoid confusions. **Fixed on [06-Jun-2013]**
