

## How to use Mercurial

Mercurial is a free, distributed source control management tool. It efficiently handles projects of any size and offers an easy and intuitive interface.

### Command line

```
hg status #Check if you have the last repository version downloaded

hg add   #Add elements flagged as ?

hg commit -m "Your message" #Commit changes and include a message

hg diff -c tip #See differences in the last commit

hg help config #Shows help tips
```

### Mercurial Typical errors

#### abort no username supplied

If does not exist, create a file in .hg called hgrc and include the following:

```
[paths]
default = http://your_domain/hg/project_name
[ui]
username = Your name and surname <Your email>
```
