

Setting a proxy configuration in R

- Step 1. Install `devtools` package if not yet installed

```
install.packages("devtools")  
library(devtools)
```

- Step 2. Set configuration for your proxy

To this aim, the utility `set_config` in package `httr` is used (Note that `httr` is a dependency of package `devtools`, and hence it is already installed in your system)

```
require(httr)  
set_config(use_proxy(url = "http://url_of_your_proxy.net", port = 9999, username = "user", password = "password"))
```

- Step 3. Proceed with the [?installation](#)
