The ECOMS useRportal

The European climate observations, modelling and services initiative (ECOMS) coordinates the activities of three concurrently running projects ([?EUPORIAS](#), [?SPECS](#) and NACLIM). Different sector-specific impact activities to be undertaken in these projects require a reduced number of variables (typically at surface, but also at pressure levels for downscaling purposes) from different data sources (seasonal/decadal forecasts, reanalysis, etc.). The *ECOMS useRportal* has been established by the [?Santander Meteorology Group \(UC-CSIC\)](#) as part of the data management activities in these projects to provide a unique access for these impact-relevant variables, gathered from existing state-of-the-art datasets. The ECOMS useRportal is a gateway based on a THREDDS data server and a suite of tools for user-friendly data exploration, access and post-processing. Since [?R](#) has been adopted for a number of tasks in these projects (validation, downscaling, etc.), a R package (*useRaccess*) for data exploration and access has been developed and new functionalities will be further developed according to the users' needs.

This trac/wiki page provides an up-to-date description of the *ECOMS useRportal*, including information of the available datasets and the documentation and code of the *useRaccess* Rdata access package. The following documents and links are the basic references to the SPECS-EUPORIAS Data Portal:

- **R Data Access package:** [useRaccess \(v1.0.2\)?](#)

Technical notes:
